- Total weight approx 23 kilos
- Dynamic switching to control very accurate manoeuvring
- 5 year no quibble guarantee
- Runs on 12V leisure battery
- Optional on-board battery available (shown)
- Free no obligation demonstration at your home
- Designed & Manufactured to ISO 9001-2000 quality standard

What our customers think about us...

My Powrwheel arrived on Wednesday as promised. On arriving home with our new caravan on Thursday, I connected the Powrwheel unit up in accordance with your instructions. I am pleased to tell you that despite a drive which slopes enough to cause a caravan to ground unless the unit was tight up against the drawbar (and despite my broken ankle!) it had no difficulty in pushing our 16½ ft 19cwt caravan up the slope of our driveway and into position at the side of our house. Thanks to the option of being able to position the tiller to either side, I was able to look along the side of the caravan to steer it around my gateposts and garden wall. The units ability to hold the caravan on a slope meant that there was no need to rush to put the handbrake on - another safety advantage. It was able to restart on the slope without any trouble, and the wheel had enough grip even on the stone chippings between my driveway slabs. I am very impressed by the abilities and performance of the unit and am more than happy for you to use my letter as an endorsement of your product.

Mr. M.J.H. Haddington, East Lothian

Very satisfied with the Powrwheel III - I'll be able to give you some more addresses of interested camping friends in the following years.

I think the Powrwheel was a great idea

CUSTOMER SATISFACTION

Dear Sirs,
I recently made enquires of your company regarding your powrtouch product for my ABI caravan. The service I received from the initial enquiry to the successful purchase and use of the product was exemplary.

The product literature, prior to purchase, and the detailed instructions for fitting were informative but clear to understand and follow. Your staff answered all queries cheerfully and fully, it is quite clear that they care about customer service. Placing the order was easy and notification of delivery was courteous and precise. All of the above contrasts sharply with the level of service (or lack of it) I received from the other manufacturer of a similar product. It may just have been a bad day but the attitude was condescending and worst of all nobody appeared able to answer my simple questions initially, nor did they bother to ring back. When I followed up, I was referred to a dealer who was only interested in taking an order and the price he quoted bore no resemblance to the published price in the literature.

Your product is superbly engineered and well finished. My caravan is quite heavy and I have a sloping drive with a 180 degree turn to get onto the road. Powrtouch took all this in its stride.

As you would imagine these products still arouse considerable interest on sites and I am only too pleased to wholeheartedly recommend your company and products and when asked, to indicate why I show this preference.

You deserve to sell many more units

Yours sincerely

John B. Jenkins

The Remote Controlled
Powrtouch

The sequence of pictures on the right show how manoeuvrable and easy the Powrtouch is to use.

Just Launched - Remote Control mover for TWIN AXLES

We now have a proven designed and manufactured remote control caravan mover for twin axle caravans, with the following features:

- Will turn caravan in an arc, backwards and forwards
- Works on wet and uneven terrain
- Weight approx 37Kg as single axle remote control mover
- Offers all the same features as the single axle remote control mover, listed overpage

Also just launched - the ALL NEW POWR BAR

This system allows both rollers to be engaged to the tyres from one side. Therefore, making the Powrtouch the perfect mover when your caravan is parked tight to a wall or fence.

Moving your caravan has never been easier with the revolutionary Powrtouch...

Your caravan can be manoeuvred easily with the minimum of effort...

Completely in control at all times, braking is instant as soon as you release the selected button...

A difficult job made easy, no fuss, no strain no worries, caravan moving made easy

What our customers think about us...

I am a little old lady of 74 and found moving my four berth Swift as easy as pressing a button, thank you Powrwheel.
Mrs I.I. Notts

I would like to thank your Sales team and the fitters for the prompt and excellent serviced received in my dealings with your company. With the Powrtouch I no longer have to concern myself with storage problems, as its simple to park the caravan in the tightest of spaces.
Miss M.P. Kirkcaldy

Used Powrtouch first time in earnest last weekend. Only one word describes it "FANTASTIC". If long term reliability matches initial performance, then it's money very well spent.
Bill Dunning

After caravanning for over 30 years, my wife persuaded me to buy a Powrtouch caravan mover from yourselves. The parcel arrived the day it was promised. Installation proved to be very straight forward and took me about 4 hours, but then I am 64 years old. After pushing and shoving various caravans for years, it was sheer delight to operate the remote control and inch the caravan right onto the tow ball. The Powrtouch coped with my gravel driveway with the greatest of ease. Turning the caravan round and parking it under a car port, absolutely no problem.

This product has increased my pleasure enormously, in caravanning and all I can say is i am absolutely delighted. Thanks again.
G. F. Lennes

The Remote Controlled
Powrtouch

The Powrtouch is one of the many Caravan/Trailer movers that are designed, developed and manufactured by Powrwheel Limited at our factory in New Milton Hampshire. This model utilises two 12 volt motors with reduction gearboxes that can be driven independently to provide maximum manoeuvrability. The motors are mounted on a strong, lightweight metal framework that clamps to the caravan chassis. The fitting of Powrtouch to the caravan does NOT require any welding or the drilling of the chassis making fitting simple. The caravan tyres are driven by a locking cam system that requires just a small turn of a wheel brace spanner (supplied); this locates the friction drive rollers to the caravan tyres. The caravan movement is controlled remotely by a small handset, by simply pressing one of the clearly marked labelled buttons on the handset the Caravan can be moved in any direction and turned on its own axis if required. Braking is completely automatic and occurs immediately the finger is removed from the selected button.

The Remote Controlled
Powrtouch

LOOK WHAT YOU GET FOR YOUR MONEY..

Powrtouch 1
Standard Powrtouch suitable for most caravans without shock absorbers

- 5 year guarantee as standard
- Palm sized remote with holder
- Compact design offering better ground clearance
- Made from corrosive resistant materials, and powder coated for longer life
- Designed and manufactured to ISO 9001-2000 quality

Powrtouch 2

Powrtouch 2 is suitable for caravans with shock absorbers. We have moved the position of the motor to give clearance for the shock absorbers. Motor and gearbox are connected to the drive rollers by gears with 1:1 ratio gear train. All other specifications as per Powrtouch 1.
